Subject: How do I debug Ultimate++? Posted by slashmais on Mon, 13 Apr 2009 09:26:58 GMT View Forum Message <> Reply to Message

Linux/KDE has an issue with searching Help;
Based on advise, I used a workaround by commenting out line 55 in Help.cpp
I need now to find the root cause of this bug, and to do this
I want to debug theide and whatever else it uses.

I have a copy of svn.1055 How do I make this into an editable/debugable package so that I can use theide to debug this package (itself, basically)?

I'd rather post solutions to problems I encounter in upp, than to always be asking for help. Help me with this, and changes are that I will be able to help others in the future.

TIA
