Hello unodgs

Almost ok. Now I initialize the grid with:

```
grid.ResizeColMode(0);
```

that is Absolute mode, and it works:

```
grid.Ready(false);
if (col > grid.GetColumnCount()-1) {
    for (int i = grid.GetColumnCount(); i < col+1; ++i)
        grid.AddColumn("", 100);
}
tabGrid->grid.Ready(true);
```

Best regards  
Koldo
