Hi, svn v1116 has errors in core.t (seems they are a bit older).

T_("date\vSunday")

T_("date\vSaturday")

T_("date\vSu")
is frFR("Sam") but must be frFR("Dim")

T_("date\vSu")
is zhCN("Fri") and zhTW("Fri"), this seems to be an error. Don't know what is correct here.

T_("date\vSa")
is frFR("Dim") but must be frFR("Sam")

T_("date\vSa")
is zhCN("Sun") and zhTW("Sun"), this seems to be an error. Don't know what is correct here.

Thank for looking at it.

The chinese and Taiwan short weekday names, are they the english short names, or should they get translated?

Hans
