Hello Koldo,

I have the same situation with this difference:  
"C:\Program Files\Microsoft SDKs\Windows\v6.0A\Lib"

instead

"C:\Program Files\Microsoft SDKs\Windows\v6.1\lib"

The gdi32.lib library is located in folder:

"C:\Program Files\Microsoft SDKs\Windows\v6.1\lib"

I want to notice that when i tried to build this demo under MSC8 with the latest source svn code I have following errors:

```
----- SysInfo ( MT MSC8 FORCE_SIZE WIN32 MSC ) ( 3 / 5 )
SysInfo.cpp
D:\source_codes\lupp\svn_google\bazaar\SysInfo\SysInfo.cpp(1179) : error C2065:

'SM\_SERVERR2' : undeclared identifier

SysInfo: 1 file(s) built in (0:01.29), 1297 msec / file, duration = 1312 msec, parallelization 0%

There were errors. (0:01.39)

Thank you for your contribution!

After building this with MINGW I can propose to divide OfficeSheet into OfficeBook and OfficeSheet. It can be added possibility to add more sheets under one book (file)!
