I use upp in the ubuntu9.04, when code tip happen, my can't input any character to codeeditor,keyboard is hung.I tested upp1209~1218,the bug all exist.

as above,when codetip occur,keyboard can't input any thing.

The screenshot shows a code editor window with a file explorer on the left. The file explorer shows a directory structure with files like 's.h', 'c>', 'h>', 'npr.c>', 'h>', 'v', 'v', 'v', and 'main.cpp>'. The main editor displays C++ code with the following content:

```
#include <CtrlLib/CtrlLib.h>
using namespace Upp;

GUI_APP_MAIN
{
    TopWindow testkeyboard;
    testkeyboard.Run(int Run(bool appmodal = false));
    testkeyboard.Run();
}
```

A tooltip is visible over the `int Run(bool appmodal = false)` line, showing the method signature: `int Run(bool appmodal = false)`. The tooltip has a light blue background and a thin border.
