Hm, It seems to be only when I have more attributes, such as:

```
TABLE_(ABC)
  STRING_(NAME, 80) NOT_NULL UNIQUE
END_TABLE
```

```
TABLE_(DEF)
  STRING (NAME, 80) NOT_NULL UNIQUE
END_TABLE
```

DEF will not have the NAME column. If I remove the NOT\_NULL UNIQUE from each, then both will have the NAME column.

Jeremy
