jeremy_c wrote on Sun, 31 May 2009 23:27Hm, It seems to be only when I have more attributes, such as:

```
TABLE_(ABC)
  STRING_(NAME, 80) NOT_NULL UNIQUE
END_TABLE
```

```
TABLE_(DEF)
  STRING (NAME, 80) NOT_NULL UNIQUE
END_TABLE
```

DEF will not have the NAME column. If I remove the NOT_NULL UNIQUE from each, then both will have the NAME column.

Jeremy

Well, this rather looks like problem in generated script.

What DB is it?

Put SetTrace for your session and then check the .log file (Alt+L in theide).
