Subject: Re: subversion client recommendation
Posted by koldo on Mon, 01 Jun 2009 09:55:50 GMT

Hello Mirek

As TheIde supports svn but requires a command line client, it would be good to include somewhere in:

- U++ install, or
- TheIde

some option to say the user what to do to get svn support.

Perhaps when the user wants to use svn in TheIde, it may:

- check if a svn client exists
- if not, suggest the user to install one giving instructions depending on the OS.

Best regards
Koldo
