It is Sqlite3. Here is the line causing the problem:

```
STRING_ (NAME, 80) NOT_NULL UNIQUE
```

Here is the log line that shows what is going on behind the scenes:

```
ERROR Cannot add a NOT NULL column with default value NULL(0): Preparing: alter table  
SUPPLIER add  
NAME text not null
```

Basically, I do not want it to be NULL and I want no default. I would like it to be required to be supplied by the application/user.

Jeremy
