Subject: Menus on dual monitors (Windows)

My app as well as even the IDE does not handle menus (or any popup) correctly when the app is on the second monitor. Here is a poor ASCII drawing illustrating the problem:

```
       | [=== My App ==============]
[ Open ] | [File . Edit . Help      ]
[ Close] | [------------------------]
[ Exit ] | [ App Area              ]
       | [-- Status Bar -----------]
```

In that example, | is the monitor divide. When I click on the "File" menu when the app is on the right monitor, the menu appears on the far right of the left monitor. It will not appear on the right monitor. This happens with menus as well as DropList's as well as dialogs that may appear.

I am on 2008.1 and Windows Vista.
