Subject: GridCtrl: How to respond to moving a row?

In my GridCtrl defining the questions, I have a field INT_ (POSITION) SQLDEFAULT(0) field that I currently do not populate. However, I would like to use the Append/Insert methods in conjunction with the Move Up/Down functions of the GridCtrl. My only problem is I cannot seem to figure out how to get notification that an item has moved up or down, thus I cannot update my POSITION values accordingly.

Any tips?

Thanks,

Jeremy
