koldo wrote on Fri, 05 June 2009 16:24Hello Mirek

Well, it seems RichFindIterator is a way to implement a parser but not a RichEdit/Qtf parser itself.

So I will do it by myself. Much less difficult than doing a Svg Painter

Best regards
Koldo

Use ParseQTF to convert QTF->RichText. Then use either direct code or iterators to go through it.
