Good idea. I have only added check to be sure

```
bool DirectoryExists(const char *name) {
#ifdef PLATFORM_WIN32
    if(name[0] && name[1] == ':' && name[2] == '\\' && name[3] == 0 &&
        GetDriveType(name) != DRIVE_NO_ROOT_DIR)
        return true;
#endif
    FindFile ff(name);
    return ff && ff.IsDirectory();
}
```
