Subject: Grid Search Color on XP = very hard to read
Posted by jeremy_c on Mon, 08 Jun 2009 16:10:39 GMT

I've attached a screen shot. This is a standard XP box/standard theme. When you search using the GridCtrl, the field you are searching on (??) turns black and the default highlight is dark blue. It's very hard to read. Is there something that can be done? Maybe just leave all the fields white (the default for highlighted text).

Jeremy
