Hello tojocky

Here I enclose you two packages one with XlsLib and other with the Demo.

This is just a Hello World to do the simplest .xls spreadsheet using directly XlsLib functions.

It has been tested in Linux and Windows.

With MSC you will need to copy to Visual C include folder stdint.h file. Look for it in Wikipedia.

With all of them you will need to add four folders in include under /src: common, data, oledoc and xlslib.

You can imagine it is too soon to put this in Bazaar. It has been made this afternoon: no wrapper at all, but:

Quote:If you can do a wrapper it would be well. If not I am open to do it

Best regards
Koldo
