Subject: Re: Include option for specific package
Posted by koldo on Wed, 10 Jun 2009 21:58:08 GMT

Hello all

I have included the directories in the Package Organizer using the -I option. It works for GCC/MinGW and MSC.

So for both compilers the program works well. For now perhaps it is enough but I think it is nicer to include the include directories as an explicit Package option...

... But I have a problem with MSC:
Both XlsLibs and \Microsoft SDKs\Windows\v6.1\Include have a file named rectypes.h

To avoid errors, XlsLib directories have to be before SDK directories. Unfortunately it seems Upp
- First reads Build Methods
- Second reads Package Organizer

So in this case:
- Or I have to do dirty things: renaming rectypes.h in SDKs
- Or I have to put XlsLib include directories in Build Methods, and before \Microsoft SDKs\Windows\v6.1\Include

Best regards
Koldo
