also, you can play with this:

```
void Tab1::PromptCell(){  
    String s;  
    s=AsString(arr.ReadRow(arr.GetCursor())[arr.GetClickColumn()]);  
    PromptOK(s);  
}
```

it is better to use AsString than in previous post because without it, you get crashes in some cases ...

also, don't forget a useful method ToString() ...
