Quote:

If I have understood, in this last example all the cells finish in 's' separated by "::::". Is this correct? It is evident that the operator '<<' does a continues strcat(...), it isn't. (Sometimes I feel to be a dinosaur... but I'm enjoying the short and powerfull syntax of C++).

Yes, it appends at the end in this case. This way you can prepare your records for importing into let's say ODBC, MS Excell etc.
