Subject: Re: Touch panel driver !!!
Posted by shg234 on Thu, 18 Jun 2009 08:33:12 GMT

mr_pedMaybe you can search for similar touch devices which are already supported in linux with open source driver (either directly in kernel source, or with external driver) and see how they work. Thanx for your reply.
I'm sorry to say, after googling   a lot I didn't find any open source touch device driver. Do you know any links? please...

mr_ped(expect some C with lot of linux kernel macros, i.e. not something casual C programmer will read easily, but it still may give you plenty of hints)
Maybe, if you find quite similar device, you will need just to tweak couple of values here and there and it will work?
This is what I'm searching.... but yet not getting!!

mr_pedI hope you have enough documentation about the device to create the driver, or at least sources of windows driver.
Yes, I do have the sources of Windows driver.
