skyhawk wrote on Thu, 18 June 2009 07:47: I think theide should just not recreate a file in the same location, but instead open the existing file, truncate it
(http://linux.about.com/library/cmd/blcmdl2_truncate.htm)

and write the new content. That way you prevent having to know about all aspects of the file (attributes, file-rights etc)

Gr,

Jan

Unsafe.

The actual protocol is: Rename current file (add .bak to filename), save file, delete backup.

At any point, either old or new file exists.
