In all cases Bombs menus have worked properly. No crash. And the only change between versions is the -msse2 or /arch:SSE2 compiler option.

Ok, I just said about SSE2 build flag and O3 compiler option. Without SSE2 build flag (and with, but O2) all works fine.

The SSE2 build flag in TheIDE expanded by "-msse2 -mfpmath=sse" compiler options, not just "-msse2".

There is no issue.
