Hi,

It happens to be, I just wrote such a driver for a specific touchpad.

Its very EASY, really

1- get the source of the X server from Xorg (not the kernel sources)

2- go to the Driver/Input directory
   ==> here is the code of many input devices (touchpads included)
      Copy one that seems closest to your driver and adapt it
      to your HW.
      Since you have the windows driver, this should be very
      easy.

3- build the driver using: './configure' ,'make', 'make install'
   NB: the binaries may not be installed in the right place
      On fedora they have to be in:
            /usr/lib/xorg/modules/input/

4- Configure the /etc/X11/xorg.conf   file with you're driver

That's it
