...

3- build the driver using: './configure' , 'make', 'make install'

NB: the binaries may not be installed in the right place

On fedora they have to be in:

/usr/lib/xorg/modules/input/

4- Configure the /etc/X11/xorg.conf file with you're driver

That's it

Thanx for your kind reply.

As I'm not very familiar with Linux driver development, would you please explain a little bit more on those step 3 and 4. It will be very much helpful for me...

Anyone else can also guide me a bit..

Siddiquee
