When I specify in upp project file on Windows:

```
custom() "post-link",  
"cmd /c echo out: $(OUTPATH), path: $(PATH), dir: $(DIR)",  
"";
```

the result will be:

```
.post-link
```

```
out: e:\UppOut\MSC9.Debug.Debug_full\Generator.exe, path: .post-link, dir:
```

```
$(DIR) must be the the directory of source files. For extensions everything is fine.
```
