koldo wrote on Fri, 17 July 2009 07:34Hello Mirek

Now class Draw has not IsDrawing() method.
IsDrawing() is used in Bazaar package Scatter.

How has it to be done with new Draw ?

Best regards
Koldo

Well, the first question is whether you really need to know if Draw is DrawingDraw...

If yes, you can use `dynamic_cast<DrawingDraw*>`.

If that is not enough, we can consider moving IsDrawing. But I was trying to simplify the interface as much as possible...
