```
String sdk9 = NormalizePathNN(GetWinRegString("InstallationFolder",
                                             "Software\\Microsoft\\Microsoft SDKs\\Windows\\v6.1",
                                             HKEY_CURRENT_USER));

if (IsNull(sdk9))
    sdk9 = NormalizePathNN(GetWinRegString("InstallationFolder",
                                             "Software\\Microsoft\\Microsoft SDKs\\Windows\\v6.0A",
                                             HKEY_CURRENT_USER));
```

works on my system. SDK 6.0A seems to be related to VS9 rather than VS8.
