Hello bianconejo

I understood well. In

With GridCtrl I have embedded well an "Option", but I do not know how to do it with ProgressIndicator.

with "embed well" I meant not just to put the control, but really handle it. With

a.AddColumn("Deroulement").Ctrls<ProgressIndicator>();

you put the control inside, but when doing a.Add(20), the corresponding Set to the underlying ProgressControl does a Set(0, 0), so it appears a default bar.

You can also derive a class from ProgressIndicator and in the costructor you can do a SetTotal(100), but again in the corresponding GridCtrl underlaying Set function you get a Set(0, 100), so you get and empty ProgressIndicator.

In opposite, if you use an Option if you do an a.Add(true), GridCtrl does a Set(true) to the underlying Option control, so it works well.

Best regards
Koldo
