Hi Mirek,

I tried with latest svn. Still the same.

Here are my OS characteristics (that may be relevant for you, ask if you need more):

- Linux Fedora Core 11
- X.Org X Server 1.6.1.901 (1.6.2 RC 1)
- theide-svn compiled in 'GCC Optimal' mode, the applied flags are 'GUI MAIN GCC SHARED LINUX POSIX'
- GTK+ 2.16.2 (and associates)
- Window Manager: Enlightenment DR17 (in Gnome I have the same result)

I removed the .upp/theide-svn directory to start again with a fresh configuration, to make sure it did not come from customized fonts. Still the same problem.

I don't know what else you could need, so don't hesitate to ask me.

Update: in NOGTK mode, the display works fine. I believe this may be related to gtk font handling... I'll search more.

Lionel
