luzr wrote on Wed, 29 July 2009 08:40Thanks, applied. I hope this will not cause any trouble (but it seems quite reasonable)

I see two possible sources of troubles:

1. not all code page names from CharsetName() are accepted by postgres (that is why I've added ASSERT). Code page names: iso8859-xx, windows-125x, koi8-r, UTF-8 are accepted and cp852, mjk, cp850 are rejected.

2. I don't know what code page is used before connection is established (in my case all messages at this time are in english, probably because of this bug).
