Hello all

When adding dinamically columns to an ArrayCtrl the columns do not get the right size until Maximizing the window.

Grid is defined like this:

```
grid.MultiSelect().HeaderObject().Absolute().Clipboard();
```

Before filling the grid:

```
grid.Reset();
```

And during program running columns are added dinamically (only when needed) like this:

```
tabGrid->grid.AddColumn("", 100);
```

Doing this it is got:

After doing a Maximize it is viewed right:

Best regards

Koldo
