Mirek

As a side note, what was the optimization about? Do you mean that using a single call to X to draw the characters is 20x faster than using 30 calls to X? My own custom code for printing text is kind of slow but I thought that X is just slow at handling different fonts. So slow that you can barely

I have just tested in X11/Xft (Fedora code, default install) - single char printing is 26x slower...

Means, printing more than single glyph at time is quite a good idea...
