
Subject: [sql] Select embeded in join

Hi,

I need to embed select inside left join. I've found AsValue function, but I could not find anything that converts SqlSelect to SqlId, so I added this:

```
SqlId AsTable(SqlId table) const { return SqlId(String("(") << text << ")").As(table); }  
to class SqlSelect.
```

Maybe it doesn't look to good, but it works.
