g6b0r wrote on Sat, 29 August 2009 15:44Hilo,

I have removed the inline keyword in RichTxt/TxtPaint.cpp:
 inline void RichTxt::Sync(int parti, const RichContext& rc) const {

and it has been compiled and built successfully.

with 1540, on debian etch, gcc version 4.1.2 20061115 (prerelease) (Debian 4.1.1-21)

Do you have guess why the inline keyword was a problem on my box?

Gabor

I think we can live without "inline" there, anyway, to my best knowledge of C++, it looks like fault of gcc.

Per standard, all inline functions should be also created in a form that is accepted by linker.

Never mind going to remove that inline..
