I have just downloaded this latest dev version and had some problem to compile new examples (GCC/win):

* Codemetric

- Core/Util.h

had to change l135-136

```
inline void EndianSwap(word& v) { byte *x = reinterpret_cast<byte*>(v); Swap(x[0], x[1]); }  
inline void EndianSwap(int16& v) { EndianSwap(*reinterpret_cast<word*>(v)); }
```

GCC do not like C-style cast here.

- RichText/RichText.h

had to change l 170

```
String Write() const { return type ? type->Write(data) : data.ToString(); }
```

data is a Value and GCC don't like to mix types here.

Nothing else to report...

Thanks,
Victor
