Hi,

The 'REPLACE IN SELECTION' popup is very annoying when it appears when what you really wanted to do is find the selected text in the file.

Evolution proposition:

 Add an additional shortcut for the 'FIND IN SELECTED TEXT' different from the 'FIND TEXT' one.
 When text is selected, it is automaticaly put in the 'FIND TEXT' popup
 When text is selected the 'FIND NEXT' feature searches this text instead of the previous searched texted

These simple enhancements would make the 'find next' feature very very practical and avoid unwanted behaviour

Is this acceptable ?
