Please excuse me if this is not the right place or if it has been reported already (in that case, feel free to delete this thread again) but I think I have found a small bug in thelde, in the Icon editor to be precise. This is what I do to make this happen:

1. I make a change to an icon;
2. I press Ctrl-Z to undo the change;
3. I press Ctrl-Shift-Z to redo the change;
4. I press Ctrl-Shift-Z again (there is nothing left to redo at this point) and this crashes the program with the error "Invalid Memory Access".

This happens on my Debian Lenny PC, as well as a Windows XP PC I tried it with.
