See reference/HotKey

Mirek

VERY NICE!

TESTED FOR WIN32 XP SP3 AND UBUNTU 9.04

BUT:

fro UBUNTU when I try to hint key: Ctrl + Alt + F11 then my gnome resets.
May be it is reserved hotkey for gnome?

I have another question: how can I hint CTRL+C+C?

I can do this when i get double CTRL+C CTRL+C and verifying interval from it to not be greater than 1 second.

Thank you Mirek, great job!
