
Subject: U++ program whose filename has Chinese word leaves logs after exit

Hello.

I built a program with U++ and rename it with filename which has Chinese word.

After the program exits I found some log files left.

In the log files I knew that it's because U++ library can't remove it successfully.

I try to find the reason why it happens and I found the problem is that it fails to call DeleteFileW function.

This is the screen shot of OllyDBG. In the parameter of DeleteFileW the Chinese words become a series of "?".

I thought it's a bug. Would you please have a look at it?

And then, even if I knew the log files help to find bugs.

Is there anyway I can disable this feature of U++?

Because sometimes the operation of creating new files and deleting files is not expected.

Thanks.

Regards,
LeiMing
