Thank you very much mr\_ped,

While I also like features of compactness and effectiveness about U++, another concern is development time. I've heard Qt has very rich libs nearly as rich as .Net which facilitates developing big applications, especially GUI applications which need a lot of coding. About being more C++ like, as far as I understood neither have used stdlib but they can make use of boost lib. So I guess they are alike in this regard. I emphasize that was what I understood about U++ and Qt and could be wrong. But I guess U++ worth further investigation before I make my final decision.

Regards.
