U++ needs TLS. Mingw does not provide one.

Save yourself the trouble and get free M\$ Windows SDK (with compiler).

Mirek[/quote]

Under Chinese version windows, vs2005+(vs2003 excepted) cannot compile utf8 encoded source files properly. There're will be many C2001 errors, therefore I chose mingw to take the compiler.

Can I use other thread library? If can, what have to pay attention?

Because I look at upp just now two days, if asked the question is too bothersome or too tired with, I felt that was sorry very much.
