Subject: Adding new row to GridCtrl... How to force a resort?
Posted by jeremy_c on Wed, 14 Oct 2009 12:08:09 GMT

My grid control is user sortable. The grid control just displays a small summary of the actual records data. There is an Add button on my form. When the user presses the Add button a complex dialog appears to allow them to enter the data needed. They then click save. At that, I add the new row to the GridCtrl but at this point I would like it to not appear at the bottom but in the correct location based on the current sort order.

I looked through the methods, I was hoping for something like .Resort() but did not find it. I do see .Sort() but I am unsure of how to get the current multisort order and direction (i.e. column 1 is UP, column 2 is DOWN and column 5 is UP... who knows what the user will actually do, that was just an example).

Any help is appreciated!

Jeremy
