Subject: upp-win32-1579.exe, cannot compile

Hello folks

I've just installed the new upp-win32-1579.exe. While installation I've checked both the VC7 and also MinGW (which I cannot find at "C:"). Now I cannot compile the most examples, nor my own projects, I always get this dialogue only:

Here and then I get "Cannot initialize Application" instead or alike.
One of the samples I got running only, the http-console.

My auto-setup-dialogue looks like this:

The VC7 runs seamless otherwise, as long I log in as admin. If I try to debug as a user, I get the dialogue "You don't have the right to debug" etc. only, as soon I press the F7, though I've tuned that at the control panel. Maybe that's related.
But now I've tried as admin also, with the same result.

What can I do now to get that running?
Do I need to switch to 2008.1 again, in order to use MinGW?

kind greets
Martin
