Subject: ColumnList BUG FIXED !!! dragging last element makes disappear all
other items

hi there

using columnlist, i recognized a strange behavior, when playing in the ColumnListDnD example.

moving the last element somewhere up, leaves the list with only this one element, the others are
gone.

here comes the bugfix:

against current 1632 revision release
ColumnList.cpp:838
 if((c >= 0) && (c < GetCount()))
instead of
 if(c >= 0)

and another bugfix concerning the keys

ColumnList.cpp:1001
 InsertDrop(ii, keys, data, d, &src == this);
instead of
 InsertDrop(ii, data, d, &src == this);
