Mindtraveller wrote on Tue, 20 October 2009 06:00WhenClose still doesn't reflect on MenuBar closing.

Well, there is a problem with "what menu".

Note that these callbacks are named

WhenOpenSubMenu and WhenCloseSubmenu.

-> note 'SubMenu'.

This is because the intended use is for the main menu (which is not a popup and is visible all the time) and callbacks reflect opening/closing of first level submenus.
