Christoph Korn wrote(google)Hello,
I want to make a Debian package of U++ for the Ubuntu software page getdeb.net.
(https://bugs.launchpad.net/getdeb.net/+bug/456359)

As I see your linux_scripts/uppdeb script is not quite the proper way how
to make a Debian package

And it seems to me that you do not use a build system. And I did not find
compilation instructions.

So please can you help me compile the sources and make a Debian package ?
