Hello,
in the ide/Browser/Util.cpp there is a bug that is causing TheIDE to crash occasionaly on WindowsXP when compiled in release mode (but not in debug mode, strangely). In version 1607 it's on the line 27 in function GetMatchLen:

```
  while(s[i] == t[i] && *s)
```

should be

```
  while(s[i] == t[i] && s[i])
```

Please apply the change to your sources.

Have a nice day

Gabi
