Hi,

I found funny problem with TabCtrl. When I maximize and minimize TabDlg example program when the second tab is selected, first tab "disappears" (see attached screenshot).

Steps to trigger this behavior:
1. Add MinimizeBox and MaximizeBox to TabDlg example program.

```
GUI_APP_MAIN
{
 TabDlg dlg;
 dlg.MinimizeBox().MaximizeBox();
 WithTab1Layout<ParentCtrl> tab1;
 WithTab2Layout<ParentCtrl> tab2;
 dlg(tab1, "Tab1")(tab2, "Tab2")
    .OKCancel()
    .Title("Tab dialog");
 dlg.Run();
}
```

2. Run it, switch to the second tab.
3. Maximize window
4. Minimize it to task bar.
5. Restore window (first tab should be gone).
