Hi,

I found funny problem with TabCtrl. When I maximize and minimize TabDlg example program when the second tab is selected, first tab "disappears" (see attached screenshot).

Steps to trigger this behavior:

1. Add MinimizeBox and MaximizeBox to TabDlg example program.

GUI_APP_MAIN

```
{
  TabDlg dlg;
  dlg.MinimizeBox().MaximizeBox();
  WithTab1Layout<ParentCtrl> tab1;
  WithTab2Layout<ParentCtrl> tab2;
  dlg(tab1, "Tab1")(tab2, "Tab2")
    .OKCancel()
    .Title("Tab dialog");
  dlg.Run();
}
```

2. Run it, switch to the second tab.

3. Maximize window

4. Minimize it to task bar.

5. Restore window (first tab should be gone).
