luzr wrote on Sun, 09 April 2006 06:261. What is "Text Size" ?

2. How you expect GetSmartTextSize to be related?

GetSmartTextSize returns the size of text that can contain some control codes - '&' to designate hotkey, or '\1' at the beginning that marks text as QTF.

Mirek

1. Text height and width (length) in pixels (for a font used in a control or any font).

2. That's what I want to find out... I just found it...

I need to adjust my tree node size after editing...
