I finished my work and the package is now published:

<http://beta.getdeb.net/updates/Ultimate++>

The sources are here so you may want to take the diff.gz in order to build the packages:

<http://archive.getdeb.net/getdeb/ubuntu/pool/apps/u/upp/>

I will definitely give it a try.

The examples themselves which you have a worth an own package

Thanks for your help again.
